

BREEAM (BRE Environmental Assessment Method) is the leading and most widely used environmental assessment method for buildings. It sets the standard for best practice in sustainable design and has become the de facto measure used to describe a building's environmental performance.

BREEAM provides clients, developers, designers and others with;

- market recognition for low environmental impact buildings
- assurance that best environmental practice is incorporated into a building
- inspiration to find innovative solutions that minimise the environmental impact
- a benchmark that is higher than regulation
- a tool to help reduce running costs, improve working and living environments
- a standard that demonstrates progress towards corporate and organisational environmental objectives

BREEAM addresses wide-ranging environmental and sustainability issues and enables developers and designers to prove the environmental credentials of their buildings to planners and clients. It:

- uses a straightforward scoring system that is transparent, easy to understand and supported by evidence-based research
- has a positive influence on the design, construction and management of buildings
- sets and maintains a robust technical standard with rigorous quality assurance and certification

BuildingPhysics have undergone training at BRE Watford and are in the process of completing the case studies to gain certification as a BREEAM Assessor.
